

Anand Bisen

Senior Architect, DataDirect Networks, Inc.

Title

Abstract

The performance and capacity required to support higher resolution HD, 2K, 4K formats challenge most storage systems and often become the environmental bottleneck. When significant investments are made in post production hardware and applications, relying on traditional or commodity storage erodes both your productivity and ROI. New storage solutions enable you to consolidate storage islands and provide the ability to share files, increasing the workflow velocity. Deploying a centralized solution also provides better performance and capacity scaling, data protection and reliable quality of service.

Biography

Anand Bisen is currently responsible for designing and deploying storage solutions for some of the world's most extreme, content-intensive environments. Prior to joining DataDirect Networks in 2007, Bisen held technology and leadership positions with Thomson's Corporate Research group and the Indiana Centers for Applied Protein Sciences. Bisen earned a master of science in computer science from Purdue University (Indiana, USA) and a bachelor of computer application from Devi Ahilya University (Indore, India).
