

Ingo Fuchs, Sr. Product Marketing Manager, Data Direct Networks

TITLE: Building a scalable infrastructure for 4K workflows

ABSTRACT

This presentation will outline storage infrastructure requirements for 4K workflows and provide specific examples of actual implementations. The core customer example will focus on a Post-Production and DI facility leveraging 4x 4K real-time streaming in and out of a consolidated storage system - supporting scanners, editing bays, DI systems and film restoration systems.

Attendees will learn:

- Key criteria for building a storage infrastructure supporting real-life 4K workflows in Post-Production and DI
- How it's done - learning from an actual customer implementation

BIOGRAPHY

Ingo Fuchs is a senior product marketing manager for DataDirect Networks. He is responsible for increasing market awareness for the company's products and solutions, educating end users about storage best practices and supporting sales. Prior to this position, Ingo worked at Quantum Corp. in product marketing and product management positions for the StorNext data management software and disk product lines where he helped drive product positioning and roadmaps.

He has over 10 years technology and product management experience and has worked for companies such as IBM and EDS. Ingo is a published author on various storage-related subjects and has been actively involved in projects ranging from server infrastructure, high-availability, storage area networks, network attached storage to backup and archiving. He has an engineering degree from the University of Cooperative Education in Mannheim, Germany.
