

2011 Creative STORAGESM CONFERENCE

June 28th 2011 at the DoubleTree Hotel, Culver City, California

AN ENTERTAINMENT STORAGE ALLIANCE™ EVENT

Rusty Rosenberger, Director of SMB Storage, Imation Corp.

TITLE: RDX: A Storage Solution for Entertainment and Video

ABSTRACT

Taking videotape out of the video editing process has delivered great advantages in editing speed and convenience – but at the cost of durability and portability. The RDX A8 removable hard disk system changes this equation, providing the high performance and random access of a hard disk, combined with high portability and scalability in a rugged form factor. The result is a system that is ideal both for primary storage during the editing process and for secondary storage and archiving applications.

The RDX A8 system is a network attached device that holds up to eight RDX cartridges of interchangeable capacities. The autoloader-like device offers iSCSi network connectivity; up to 8 terabytes of native capacity storage using eight 1TB cartridges; table-top or 2U high rackmount configuration; remote management interface; and enterprise-class throughput.

BIOGRAPHY

Rusty Rosenberger is Director of SMB Storage at Imation Corp. He has more than 25 years experience in high-tech industries, working in strategy, business development, product line management, product marketing, and new product commercialization at 3M, Imation and InPhase Technologies. Rusty is a former chairman of the board of the directors of the Optical Storage Technology Association (OSTA).
