

2011 Creative STORAGESM CONFERENCE

June 28th 2011 at the DoubleTree Hotel, Culver City, California

AN ENTERTAINMENT STORAGE ALLIANCE™ EVENT

Tom Goldberg, VP Product Development, Cache-A Corporation

TITLE: LTFS and tar archiving for creative professionals

ABSTRACT

The newly available LTFS open-source code from both IBM and HP provide pathways to a long sought-after and elusive standard for interchanging data tapes. The venerable Unix program 'tar' has been filling this role since the 1970's but is missing one thing LTFS provides: a directory of the contents of each tape. Is LTFS really the solution? Will it work for everyone? Is it as easy to deploy as some would have us believe? Cache-A's Tom Goldberg will discuss these questions and the implications for this new standard on our industry.

BIOGRAPHY

Tom has been a professional in the television industry since the late 1970s working in engineering, product management, and marketing roles for a wide variety of notable manufacturers including Ampex, Philips, Pluto and Quantum. He is one of the founding partners of Cache-A Corporation, dedicated to provide easy archiving solutions to the industry.
